

# Cable Pass Through

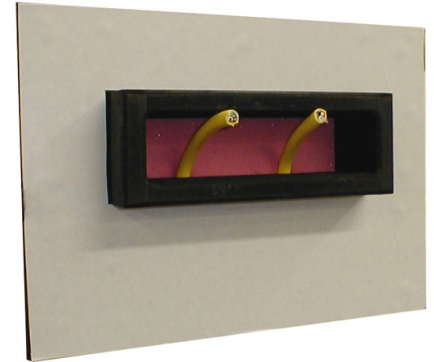

- ◆ Strong and durable with excellent acoustics
- ◆ Easily mounts on almost any wall
- ◆ Maintains sound isolation plus added damping
- ◆ Durable surface for easy care
- ◆ Quick and simple installation
- ◆ Low cost acoustic treatment without the clutter
- ◆ Won't clash with existing decor

## Maintain Sound Isolation Through Walls

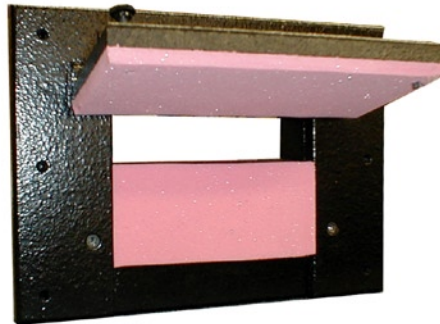

ASC has an engineered solution for maintaining sound isolation while running wires through walls. This product is great for recording studios or home theaters, or any situation where a soundproofed room needs to stay soundproofed. This is a kit that's easily installed no matter how thick your wall is. As long as you can cut a hole in your wall, the **ASC Cable Pass Through** is for you. We've also incorporated our exclusive **WallDamp** into the design to help damp any low frequency vibration that may try to escape from your room.

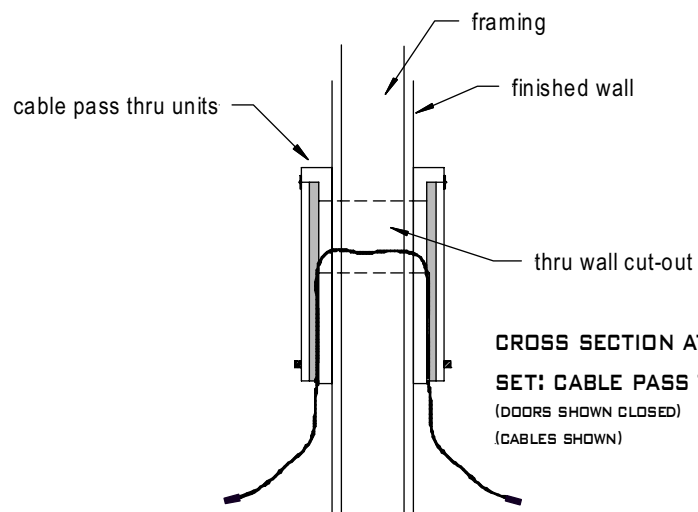

ASC designed the Pass Through using a special memory foam that helps create a tight seal around the cables. Even the slightest air space can leak a tremendous amount of sound, so we've taken great pains to mitigate that possibility. A hinged door with thumb-screws ensures a super tight seal. For situations where maximum sound isolation is required, install two Pass Throughs back to back. This will give you a hinged door on both sides of the wall.

## Incredible Finish Quality

ASC designed the Pass Through using a special memory foam that helps create a tight seal around the cables. Even the slightest air space can leak a tremendous amount of sound, so we've taken great pains to mitigate that possibility. A hinged door with thumb-screws ensures a super tight seal. For situations where maximum sound isolation is required, install two Pass Throughs back to back. This will give you a hinged door on both sides of the wall.
